

Otiblock® Spray and Drops combine efficacy against earwax impaction and prevention of relapses with a formulation respectful with the outer ear physiology to avoid complications.

PROBLEM

The manipulation of the outer ear with cotton swabs at home, or other objects in inexperienced hands, is not only dangerous but can worsen the impaction of earwax and even lead to external otitis of infectious origin. Moreover, some commercial products either work only as lubricants not breaking up the earwax, or modify the natural pH of the outer ear canal.

SOLUTION

OTIBLOCK® is an effective and safe solution proven through hundreds of thousands of treatments in many countries in Europe, America, Africa, the Middle East, and Asia.

RESULTS

The use of OTIBLOCK® is an **effective and safe remedy for the removal of impacted earwax that can even be used on a regular basis to prevent recurrences.**

If manual removal by a specialist is required, it can be used a few days before to facilitate the procedure.

"It is the best product for earwax." -Anonymous customer upon online purchase at FARMAINSTANT.COM on 21/01/2017. Verified opinion by NetReviews
