

# What is habeo?

**HABEO** is a state-of-the-art non-invasive handheld medical therapeutic device providing neuromodulation therapy with the ability to temporarily reduce hand tremor. **It is the first and only CE certified medical class IIa therapeutic device for hand tremor reduction in the EU.** It was designed to give patients who suffer from Essential tremor, relief from the symptoms for few hours allowing to perform daily tasks.

## How does it work?

The working principles of the device are based on AI controllable vibrational therapy, interrupting the neurological loop. It contains sensors that monitor the tremor level and personalize vibrational therapy in order to maximize the treatment effectiveness.

Daily use of **HABEO** gives ET patients a relief from the symptoms for the time they need to perform ordinary-life tasks, such as eating, drinking, writing, using electronic devices etc...
