

Small molecule APIs made with compelling science

Open dialogue. Successful delivery.

Welcome to Pfizer CentreOne. We're a global CDMO backed by Pfizer resources specializing in small molecule API synthesis. Working closely with you, we combine our technical and commercial knowledge with open dialogue to solve challenges. At Pfizer CentreOne, we're dedicated to delivering on what we promise.

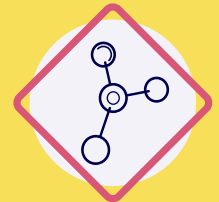

We can perform almost any kind of chemistry you need, now

With 40 years of experience and counting, there are few challenges we haven't encountered. Because our science and manufacturing capabilities span the requirements of Pfizer's global small-molecule portfolio, that means together we can marshal proven resources to offer you the small-molecule API you need, when you need it.

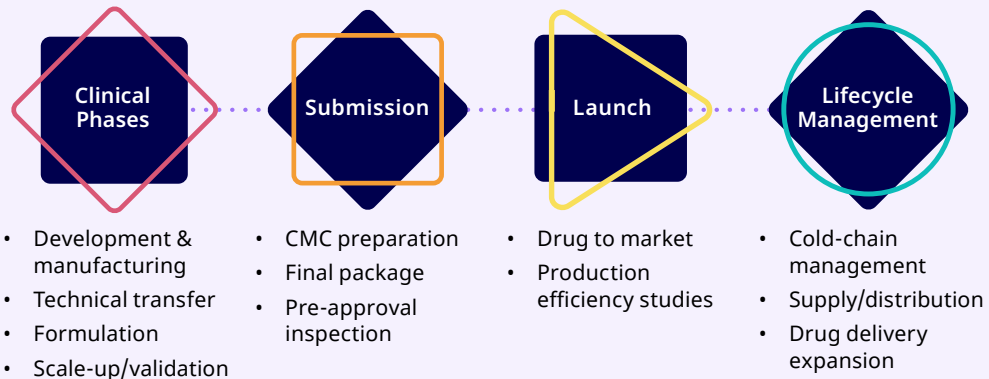

Scientific mastery of small molecule API synthesis

- Complex organic synthesis
- Fermentation and bioprocessing up to 150,000-liter
- Scale with several isolation technologies
- Milling and micronization
- Process optimization and scale-up
- Process industrialization

An altogether different approach to API synthesis

Refine your small-molecule API for therapeutic performance and efficacy with an altogether different kind of CDMO. Dedicated to your long-term success, we help you define the chemistry and processes you need to see your breakthroughs reach patients faster.

Ready to shape your API into a small-molecule masterpiece?

There's no limit to what we can achieve together. Get in touch with our small-molecule experts to start your API manufacturing journey.
