

WHITEPAPER

EXTRACTABLES AND LEACHABLES
STRATEGIES FOR
PHARMACEUTICAL PRODUCTION
TUBING

intertek.com/pharmaceutical

ABSTRACT

In order to mitigate the risks of potentially harmful substances leaching from contact materials or process tubing into a medicinal/pharmaceutical product which may present a health risk to the patient, a robust approach to extractables and leachables (E&L) studies is required in order to gain a good understanding of the materials in the tubing products.

In this short article, our expert, Dr Tino Otte, Senior Scientific Consultant, describes the steps of a rigorous E&L study that can be taken to ensure safe and high-quality materials and tubing products.
