COMPOSITION

Main component	Per film	% NRV(*) 1 film (*Nutritional Reference Values)
Vitamin D3	50 mcg	1000

SIZE

tbd

PACKAGING

30 film - each film in single packaging

BENEFITS AND HEALTH CLAIMS

- contributes to the normal absorption and use of phosphorus and calcium by our body, maintaining normal levels of calcium in the blood and also contributing to the normal maintenance of bones (important in subjects particularly at risk such as menopausal women (often having osteoporosis, an age-related disease, in which there is an increase in bone fragility).
- contributes to the normal function of the immune system.
- contributes in particular life's habit : people who have to lead a withdrawn life and who for long periods of time cannot stay in the open air and expose themselves to sunlight (for example to the elderly, they cannot synthesize it and may have low levels of Vitamin D).

VITAMIN D3 is therefore a supplement of Vitamin D to be used to prevent possible deficiency of this nutrient.

GLUTEN FREE - LACTOSE FREE
