

Our industrial footprint

EUROAPI is a global company with a unique European industrial footprint, including six manufacturing sites offering scalability and a wide range of innovative technologies.

- Haverhill:** Flow chemistry and Spray Drying
- Elbeuf:** Fermentation and Vitamin B12
- Vertolaye:** API, Corticosteroids Micronization and Solid Chemistry
- Frankfurt:** API Development, and Oligonucleotides and Peptides
- Budapest:** API Development and prostaglandins
- Brindisi:** APIs, Anti-infectives, Chemistry and Biochemistry

Our fundamentals

Reliability

EUROAPI is the industry's leading European API company, with a unique European industrial platform and proven track record of reliability.

Business continuity

EUROAPI is committed to its customers, offering fast-to-market solutions and on-time delivery.

Quality

EUROAPI provides active ingredients that meet the highest pharmaceutical standards.

Premium customer service

EUROAPI provides peace of mind through tailored solutions and a long-term partnership approach.

~200 APIs in portfolio

~3 350 employees

Headquarters in Paris, France

Sales and Support functions covering more than 80 countries

We provide a large range of API solutions addressing multiple therapeutic areas: Originator and generic products through our dedicated core platforms

and innovative medicines through our CDMO activities

Prostaglandins

- Strong competency with over 45 years of experience
- Historical process development and scale-up of new chemical entities

Opiates & controlled substances

- An end-to-end activity turning poppy seeds into active pharmaceutical ingredients
- Large range and scale (narcotics, NALs¹ products and niche products)
- Highly regulated narcotics market (sole producer in France)

Anti-infectives

- Strong expertise in fermentation, including large-capacity

Corticoids & Hormones

- Only integrated European manufacturer and independent player
- Over 60 years of experience at Vertolaye facility

Vitamin B12

- Only Western Vitamin B12 manufacturer; requires sophisticated fermentation techniques (purity)

Other small and complex molecules

- A wide offering covering multiple therapeutic areas for human health and animal care

- Driven by a new CDMO organization worldwide
- Offering flexibility and high degree of customization to meet customers' expectations from early phases to market.
- Supported by 6 top-tier development and manufacturing sites across Europe
- Equipped for manufacturing excellence to the highest standards of product quality and regulatory compliance

CDMO core platforms

- Oligonucleotides and Peptides including RNA medicine
- Small molecules custom synthesis including Highly Potent molecules & Cytotoxic payload for ADC
- Small molecules produced by microbial fermentation
- Particle engineering by spray drying and micronization
- Drug delivery solutions
- Steroids & hormones
- Opiates & controlled substances
- Prostaglandins

CDMO services

- Custom process development
- APIs for clinical development and supply
- Commercial supply
- Regulatory support

⁽¹⁾including Naltrexone and Naloxone
