

Amplifying ingenuity from curiosity to cure

From early discovery and development through manufacturing and commercialization, Curia's suite of custom solutions allows us to tailor every engagement to your precise needs, whether that's an independent project or an opportunity that spans the drug development lifecycle.

RESEARCH & DEVELOPMENT

Drug Discovery

Identify, refine and secure breakthrough compounds

The Curia team is an extension of your own, applying deep scientific expertise to help you accelerate your innovation and progress through the drug discovery and development continuum. From concept to candidate, we aim to reduce costs, shorten timelines and help guide you to better outcomes.

Our solutions for drug discovery include:

- + Comprehensive discovery biology
- + Synthetic and medicinal chemistry
- + DMPK and bioanalytical services

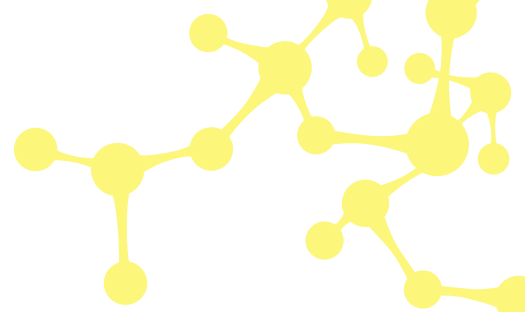

Drug Substance & Process Development

Advance the development of your compound

Our experienced team of scientists and drug development experts will help you navigate the development of your compound and gain strategic insight into manufacturability. With wide-ranging capabilities across drug substance and process development as well as drug product formulation, we can support your program from IND through commercialization.

Our solutions for drug substance and process development include:

- + Chemical process R&D via batch mode and continuous flow
- + Non-GMP and GMP intermediates
- + Clinical-stage APIs
- + Biotransformations, enzymatic reactions, preformulation/formulation and material science

RESEARCH & DEVELOPMENT

Drug Product Formulation & Process Development

Maximize the potential of your formulation

Accelerate your drug product development with our leading technology and proven expertise. You can count on our skilled scientists, practical experience and rigorous quality standards to support you throughout the development process, working together to conquer even the most complex challenges.

Our solutions for drug product formulation and process development include:

- + Risk assessment
- + Statistically designed experimentation
- + Performance and safety attribute identification
- + Manufacturability and packaging stability analysis

COMMERCIAL MANUFACTURING

Drug Substance Manufacturing

Bring your compound to market quickly and safely

Curia provides custom synthesis and contract manufacturing services for all phases of the drug development journey, leveraging our unmatched chemical and technical expertise to securely move your compound from development to commercial manufacture.

Our solutions for drug substance manufacturing include:

- + Cutting-edge technology
- + Efficient chemical development and cGMP manufacturing services
- + Complex APIs, including generics, highly potent and cytotoxic compounds, sterile APIs, steroids and controlled substances

COMMERCIAL MANUFACTURING

Drug Product Manufacturing

Increase the impact of your product

Get your product to patients safely and quickly. Curia provides high-quality, flexible sterile contract manufacturing services customized to meet your unique needs. As a leading expert in the aseptic filling of drug product, our offering includes a complete suite of services for all sterile dosage forms at any scale.

Our solutions for drug product manufacturing include:

- + State-of-the-art facilities and equipment
- + In-depth expertise
- + Best-in-class containment procedures
- + Enhanced sterility assurance, regulatory compliance and operator safety

LAB TESTING SERVICES

Lab Testing Services

Validate and accelerate your compound

Look to our seasoned scientists to help speed your product to market. Our R&D and manufacturing lab testing services support clients at every stage of the discovery and development process, assuring product efficacy and patient safety from the outset.

Our lab testing services include:

- + Current USP, EP and JP compendial methods
- + Strict compliance with cGMP requirements

Curia, formerly AMRI, is a global contract research, development and manufacturing organization, offering products and services across the drug development spectrum to help our partners turn their ideas into real-world impact. We partner closely with pharmaceutical and biotechnology companies to boost business performance and improve patients' lives.
