A world of opportunity

FUJIFILM Diosynth Biotechnologies is a world leading cGMP Contract Development and Manufacturing organization. Our mission is to help our customers to develop better pharmaceuticals and bring them successfully to market.

Join us to make a difference

A career with FUJIFILM Diosynth Biotechnologies is an exciting (and rewarding) partnership. We're committed to enhancing the lives, not just of our communities, but also of our employees, which is what makes working with FUJIFILM Diosynth Biotechnologies the opportunity of a lifetime. You will have the chance to make a real difference in people's lives. As part of our team, you will be helping to deliver tomorrow's medicines, enriching the community and the environment, delivering a healthier world and changing people's lives for good.

Invest in what you care about

Our people are what make FUJIFILM Diosynth Biotechnologies stand out. We recruit talented and passionate people, each playing a vital role in our success. We value our employees, recognizing and rewarding outstanding performance, as personal development and accountability are key to our success. We have global Centers of Excellence in the US and UK that offer careers in a wide range of disciplines within research and manufacturing as well as a host of opportunities in administrative and managerial roles. At our sites in North Carolina and Texas in the USA, Hillerød in Denmark and Billingham in the UK, we are constantly recruiting qualified and motivated people who will have the opportunity to thrive, developing their own career path.

FUJIFILM Diosynth Biotechnologies offers a healthy work environment that promotes individual responsibility, allowing you to grow and progress. We create a working atmosphere that encourages progression through continued learning, professional development and high achievement. We support our employees with programs that motivate and educate, promoting a healthy work-life balance that ultimately increases personal well-being and employee satisfaction.

Our employees also benefit from one of the most comprehensive and flexible health benefit programs in the industry that will meet their needs and that of their families.

Be a part of developing tomorrow's medicines

The development of biopharmaceuticals and viral products is at the forefront of innovation in science today, and it provides a world of exciting opportunity.

At FUJIFILM Diosynth Biotechnologies we work in partnership with our customers, helping them to bring their biologics and vaccine products from the initial laboratory stages right through to the patient whose life they'll be changing for good.

So if you are looking for an inspiring career at the cutting edge of science then there are opportunities for you at FUJIFILM Diosynth Biotechnologies.

Committed to our communities

We believe in putting people and the community first. That's why FUJIFILM Diosynth Biotechnologies and its employees are proud to have donated tens of thousands of dollars to good causes, including the American Heart Association, Wounded Warriors, National Breast Cancer Foundation, Ronald McDonald House, Toys for Tots and Salvation Army.

We support ongoing donation programs throughout the year to help raise funds and awareness for people around the world.

We also work with local schools, colleges and universities to raise the profile of their sites and promote science as a career.

Full-time employees are encouraged to spend 20 hours of volunteer time during working hours each year for these and other charitable activities.

“My work at FUJIFILM Diosynth Biotechnologies is satisfying and rewarding knowing that I am part of a team that is involved in life-saving and life-improving medicines.”

Melissa Quick

VP, Enterprise Business Planning S&M

Having worked at FUJIFILM Diosynth since 2003 I have gained invaluable experience working in multiple areas across the organization. In each of my roles, FUJIFILM Diosynth Biotechnologies have given me opportunities to lead, and empowered me to make decisions which have allowed me to gain skills that are not easily taught.

My first position at the company was as a Research Specialist, an entry level Scientist position in the Process Development labs. After working in this role for three years, I had the opportunity to transfer one of the projects I helped develop into the manufacturing facility, allowing me to gain experience in the manufacturing environment.

It was a great experience and, after exploring opportunities that would allow me to continue in the manufacturing space, I was offered a role as a Manufacturing Coordinator. This role allowed me the opportunity to understand the day to day activities required to run a multi-product manufacturing facility.

Following this role, FUJIFILM Diosynth Biotechnologies provided me with another opportunity within the Quality Assurance group where I was able to spend three years becoming a subject matter expert in multiple disciplines including

deviations, analytical method qualification and validations and stability.

My passion for the past three and a half years has been in the Project Management group where I have been able to use all of the experience I have gained at FUJIFILM Diosynth Biotechnologies to allow me to successfully partner with our customers to meet their product needs by leading their program from early phase through to late phase and commercial supply.

In the last year and a half I have had the opportunity to lead our talented group of nine Program Managers as VP, Program Management and S&OP at our North Carolina site. This role allows me to maintain my close relationships and daily interactions with team members and customers as well as serve as a member on the site's Senior Leadership Team.
