Geloren^{horse}

One of the important functions of joints is shock absorption during running, trotting or jumping. If a joint begins to wear due to these activities, it may lead to development of arthrosis and the joint damping function is limited. Consequently, this may cause severe joint pain and mobility problems in horses.

Proper nutrition focused on movement difficulties in horses may help to ensure well lubricated joint structures and elastic articular cartilage.

represents premium care for horse joints in the unique form of jelly cubes that facilitates administration and can be used as a reward for the animal's performance.

The Geloren formula was designed to meet the demanding requirements of complex joint nutrition in horses. It contains a very high dose of hyaluronic acid; its effect is supplemented by chondroitin sulphate and gelatin action.

Geloren is suitable especially for horses exposed to higher loads (sports, riding or working breeds), for older horses or horses with symptoms of joint problems.

NUTRIENTS CONTAINED

HYALURONIC ACID is a natural polysaccharide that comprises one of the main components of the extracellular matrix and is a natural component of the body's connecting tissues. Thanks to its strong water binding ability, it works in the joint fluid as a lubricant and shock absorber and reduces the degradation of articular cartilage.

CHONDROITIN SULPHATE is an important building block of articular cartilage and other connective tissues – bones, tendons, and ligaments. In cartilage, it can retain water, which gives it its flexibility. Due to its properties, it rebalances the joint fluid composition.

GELATIN is a natural soluble protein that is an important source of glycine and proline amino acids which are important for collagen construction. It has a vital role in the formation and regeneration of connective tissues, joints and cartilage nutrition.

NUTRIENTS IN THE DAILY DOSE

pcs **3**

- 180 mg Hyaluronic acid*
- 855 mg Chondroitin sulphate
- 6 000 mg Gelatin

*Hyaluronic acid contained in Geloren has a specially adapted molecular weight, so that its effect may be utilized to the maximum extent.
