An explosive experience with our Innovative technology

As patients and consumers continue to seek for novel formats that deliver a completely new experience, **CDMOs** need to understand what consumers prefer in terms of oral dosage forms and try to satisfy those needs through innovative options. **OTC** and **Nutritional Products** are purchased by consumers based on their perceived value in addressing **their health conditions or maintaining good health.**

At **Procaps Group** we take those needs into consideration and transform them into ideal technologies and **Chewgels™** is a clear example of that.

Our **Chewgels™** technology consists of a **chewable capsule** that delivers an active ingredient without the need of water and with a delicious flavor making it a **convenient, portable, on-the-go solution.**

We are landscape techniques widely accredited in the food industry and adapting them to the pharmaceutical landscape, achieving the chewability experience of our chewable soft gelatin capsules on a mechanical texture scale.

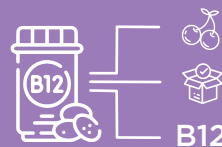

Some of the benefits of **Chewgels™** include:

Shell **Solubility and Stability** Assurance.

With our **Chewgels™**, the fill content may contain **solutions, suspensions, pastes and emulsions.**

We have the ability to select the right **gelatin and appropriate excipients** to hold the **ingredients and the flavouring.**

Lipid coating of the API for special taste masking applications.

Innovation in **OTC products** with **Chewgels™**

Ibuprofen
