

CPO

From IMPs to Commercial Pharmaceuticals
Contract Packaging Organization

PRESTIGE
BIOLOGICS

We are an Expansion of your team.

Full range of reliable CPO (Contract Packaging Organization) services from packaging, pharmaceutical storage and distribution

Prestige Biologics has adopted the full-single-use-system in the industry first in Korea. And established production facilities incorporating our proprietary ALITA Smart BioFactory technology™. Through innovative engineering, we provide upgraded CDEMO services in the CDMO sector. We offer optimal solutions for our customers, including facility design tailored to their needs and efficient production of clinical samples and commercial products, enabling them to respond flexibly to the rapidly changing pharmaceutical environment. With a customer-centric approach, we ensure quality stability and guarantee on-time delivery of customer projects through rigorous development.

Contract Packaging Organization (CPO) services are crucial processes that ensure the stability, safety, and efficacy of biopharmaceuticals. Prestige Biologics provides comprehensive packaging services from investigational medicinal products (IMPs) to commercial pharmaceuticals.

CPO Services

We provide customized secondary packaging solutions for Investigational medicinal products.

- Double-blind labeling
- Labeling of vial or pre-filled syringe
- Single label or Booklet label
- Support for cold chain distribution

Plant 1. PIONEER
6,400 L

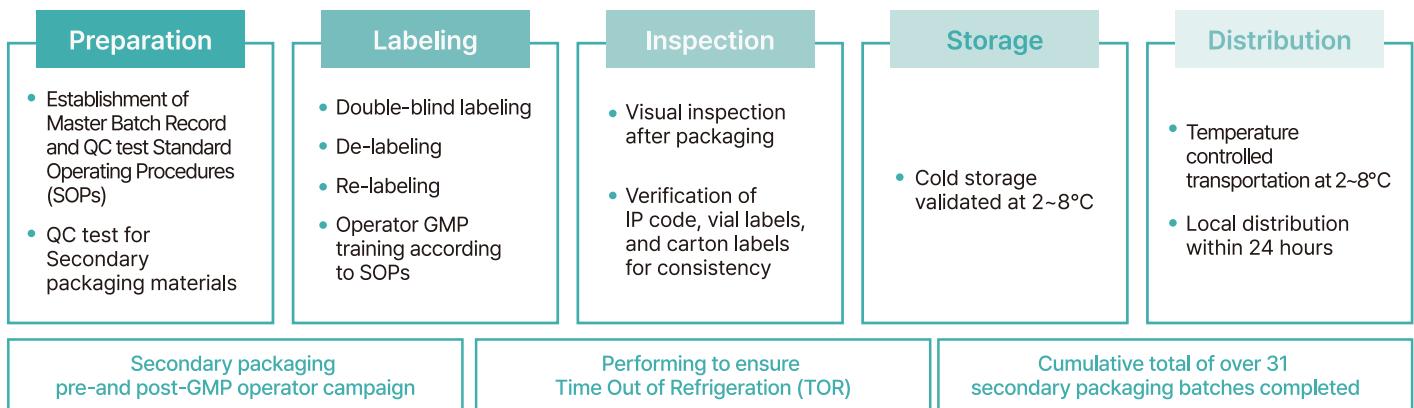

Plant 2. FRONTIER
28,000 L

CPO Process

Prestige Biologics's CPO service provides secondary packaging services tailored to the customers' requirements and follows packaging processes that comply with EU and international GMP standards.

We offer labeling and re-labeling services for IMPs such as vials and pre-filled syringes to meet the requirements for double-blind testing. Additionally, we establish specific GMP Standard Operating Procedures (SOPs) for individual projects based on the Time Out of Refrigeration (TOR) criteria for the investigational medicinal products (IMPs), ensuring compliance across processes.

We are continuously expanding our investments in reliable collaborative partners to meet the needs of temperature-sensitive IMPs and bio-cold chain. This includes domestic and international transportation services as well as cold chain storage services.

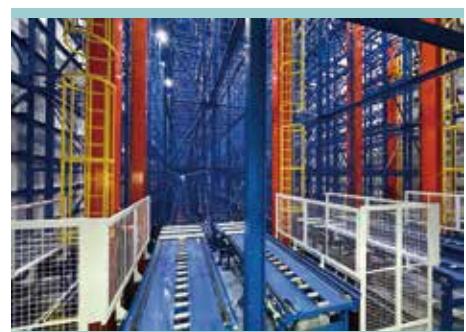

Warehouse Service with Robotic System / Environmental Monitoring System

Prestige Biologics' Campus 2 is equipped with a large-scale robotic automated storage system featuring Rail Guided Vehicles (RGV). The automated warehouse system is divided into 3 temperature-controlled areas: ambient, cold, and frozen, all compliant with GMP standards. The ambient storage area accommodates a total of 3,600 pallets, the refrigerated storage area holds 127 pallets, and the frozen storage area has a capacity of 124 pallets. We operate an internationally recognized SAP Automated Warehouse System(AWS).

Ambient (15°C to 25°C): 3600 Pallets

Cold (2°C to 8°C): 127 Pallets

Frozen (-25°C to -15°C): 124 Pallets

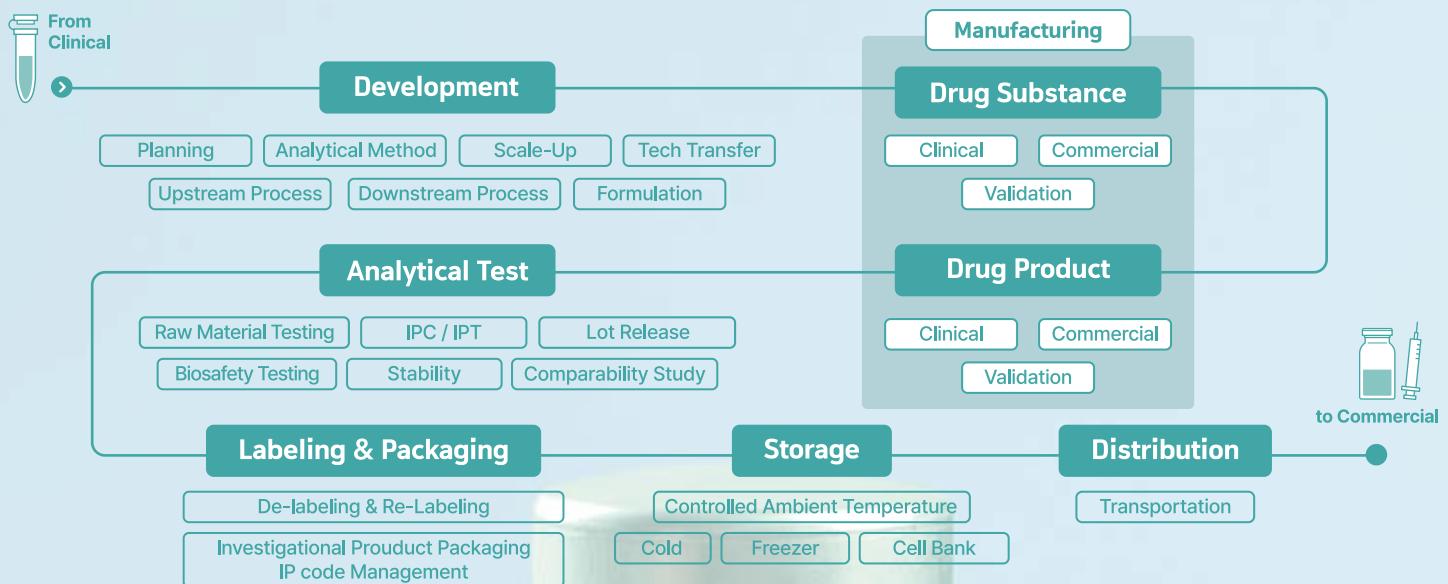

Plant 3. VOYAGER
88,000 L

Plant 4. ADVANTURE
32,000 L
