

# Transforming Package Design

Oliver [DESIGN]

Oliver Design combines ingenuity, artistry, and innovation to deliver novel packaging solutions for drug delivery and biologic applications. Our packaging solutions offer the highest quality to help you deliver on your promise to develop lifesaving therapies.

## **From Concept to Fully Engineered Solution**

We meet customers where they need help, calibrating each design to ensure cost efficiency, ease of production, and flawless functionality. Whether you work with us to devise a completely new concept or to modify an existing design, you own the final output—which allows you to provide engineered designs to multiple production companies to get the best quote.

## Rapid Production Representative Samples

As a part of our approach to packaging design, we make high-quality samples that look and feel like they ran on the production line.

**PRODUCTION REPRESENTATIVE SAMPLES ARE IDEAL FOR:**

Material  
Comparative  
Assessments

Child Resistance  
Testing

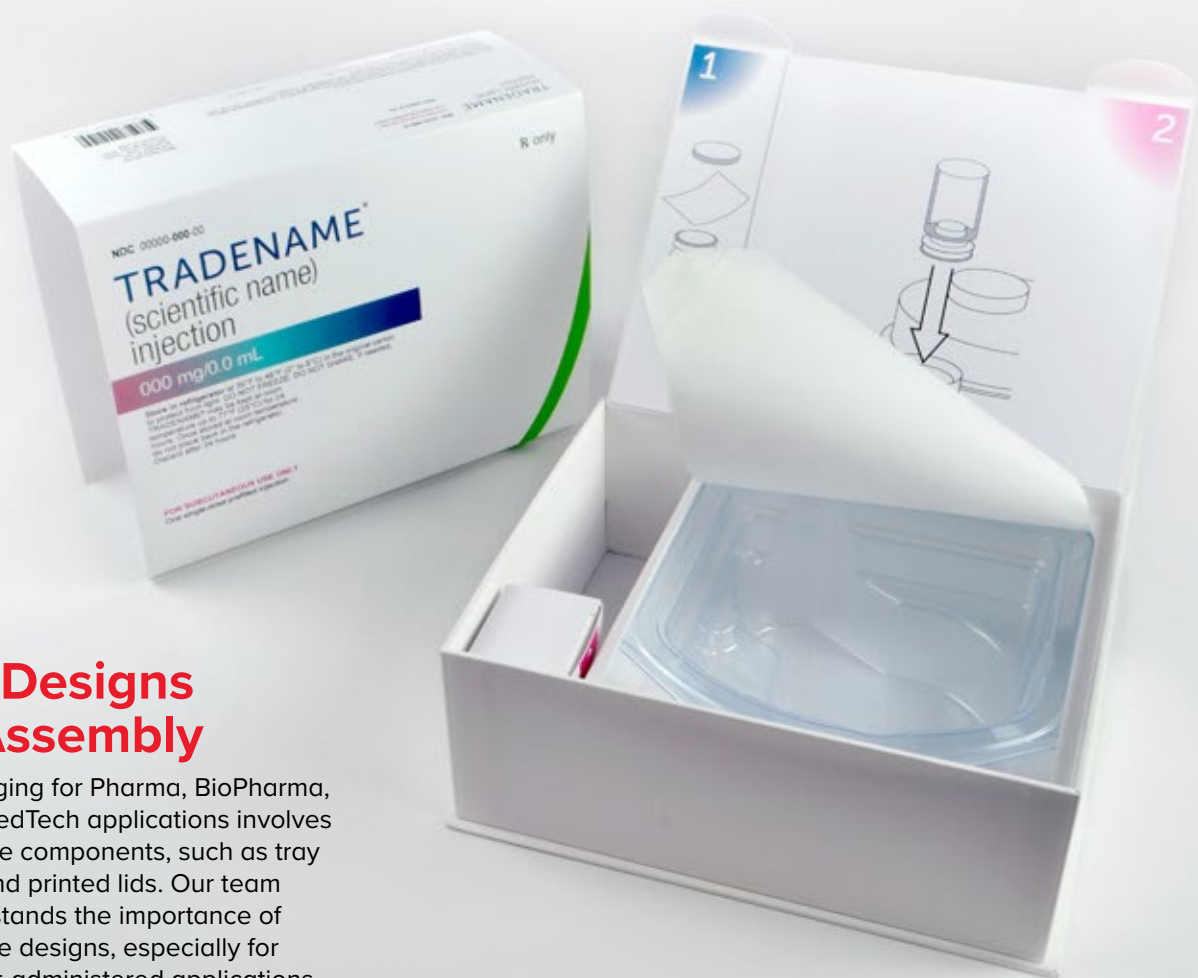

Market Evaluations  
Requiring  
VOC Feedback

Human Factors  
Studies

FDA  
Submissions

## Kit Designs & Assembly

Packaging for Pharma, BioPharma, and MedTech applications involves multiple components, such as tray sets and printed lids. Our team understands the importance of intuitive designs, especially for patient-administered applications.

---

## Biologic Therapies

We design packaging for a wide array of parenteral drug therapies and delivery systems, including:

- Vials
- Prefilled Syringes (PFS)
- Autoinjectors
- Wearable devices
- Microneedle/  
Transdermal patches
- Nasal applications

### Pharmaceutical | Dose Packs

Oliver Design can handle your cold form and thermoformed blisters, which are critical packaging formats for most small-molecule therapies. We quickly create blister pack designs and sample sets.

### Production Representative Solutions

To deliver a production representative solution, we produce:

- Printed cartons, including assembly
- 1- or 2-sided Instructions for Use (IFU) or Patient Insert (PI), complete with folding and wafer seal

### Stick-Pack Pouches

We produce pouches for powder fill applications that require stick-pack packaging with a laser-scored opening feature.

### Placebo Tablet Press

We can make placebo tablets to your specification for a specific study or evaluation.

### Water-Filled Vials

We supply water-filled vials to support operational trials for biologic fill-finish production lines.

### Commercial Production

Oliver Design's commercial production and assembly services ensure excellence, accuracy, and speed. We have quality systems and cleanrooms in place to meet the stringent requirements for pharma-grade and medical-grade applications. Our production and assembly services are ideal for Phase III clinical trials and initial market-entry requirements.

## PRECISION & PERFORMANCE

Oliver Design is here to help biotech companies accelerate on the path from development to commercial market. We understand the importance of speed and keeping pace with our customers.
