Innovation, creativity and knowledge drive Arca's approach in every field

Pharmaceutical labels require clear graphics and readable texts, for a variety of applications, which adapt to specific products from small, medium or large vials, bottles and blood bags. Innovative solutions, the best digital and analog printing machines, dedicated production and anti-mix-up procedures, laboratory tests, video inspection systems that verify the product 100% and quality controls for the release of product batches, complete the offer for the pharmaceutical sector.

B CORP™

ARCA GROUP IS A BENEFIT CORPORATION

A new legal status that proves our commitment to continue and strengthen product and service leadership, combined new commitments towards the Environment, Workers, Community.

Arca Etichette is proud to be in the B Corp community

A high international standard that certifies our business as a positive force for good, measuring environmental, social and economic performance of the business

HOW WE WORK:

- Innovative solutions and a large choice of standards and green materials for an ecological packaging with low impact on environment
- Flexibility, just-in-time stocks and long term stock schedules
- Customer service, prepress dept. and a dedicated technical know-how
- 30 printing, assembling and converting machines digital, flexo, off-set
- Control and quality assurance: to ensure customer satisfaction

More than 8000 B Corps worldwide

High selective status

To change the way business is done for good

Shrink sleeve labels that completely "dress" products, of any shape, guaranteeing an exceptional visual impact and more space for communication. In addition to decorating, sleeve can also seal package.

Arca Etichette's Systems Division proposes complete and innovative identification solutions for the manufacturing industry: self-adhesive labeling machines, print-apply and laser markers synonymous with productivity, reliability, safety and durability.

FOR PRIMARY IDENTIFICATION

Multilayer Labels

The ideal solution for ingredient list, multilingual texts and detailed instructions in small and medium sizes for pharmaceutical industry.

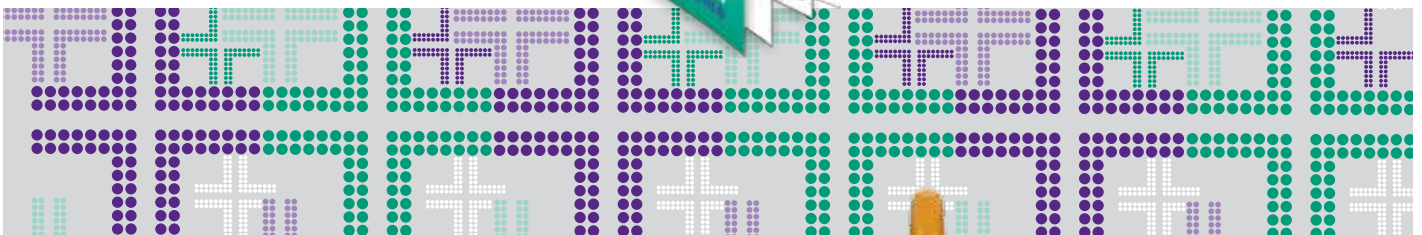

- From 3 up to 11 pages
- We can combine different materials and colors: plastic and paper, white and clear

Multipage Labels

The original multipage self-adhesive labels, zig-zag or booklet folding, create additional space for further information for the user, who can also detach and keep them, adapt to any packaging type, increase the visibility of your product and the impact at point of sale.

- Any size and shape
- Even with glossy or matt lamination
- Overprintable with variable data
- Braille printing ● Applied automatically

No Label Look Labels

The ultra-clear No-Label-Look labels are particularly suitable for bottles, vials and jars in glass or transparent plastic. A captivating visual effect and perfectly integrated with the packaging for a satisfying result without the label being perceived on the product. Any printing technique can make your decoration unique!

Tactile Labels

In compliance with the European standard EN 272, we print Braille or specific embossed tactile warning symbols so that blind people can recognize the dangerous substances contained in the products. This label shows Braille texts or triangles, with 18 mm or 9 mm side, which can be applied anywhere on the packaging.

FOR SECURITY

Anti-counterfeiting Solutions

All the seals/labels can have additional security features:

- hidden microtexts
- wood/UV detectable/special security inks
- IR inks
- photo/thermochromic inks
- pen reactive inks

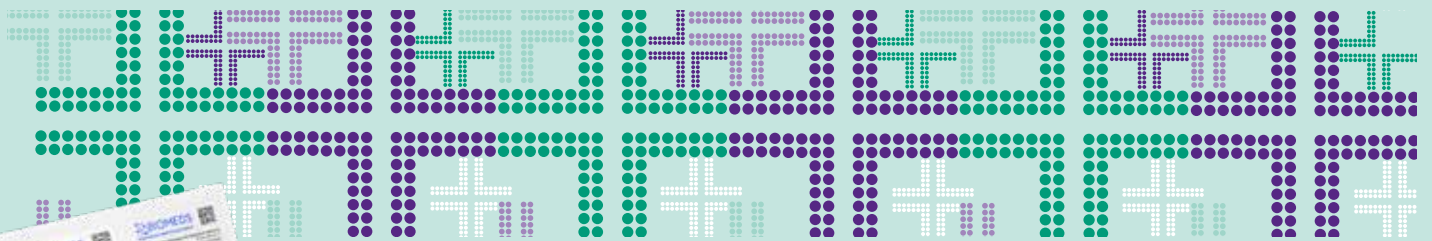

Wipe-Out® Seals

Arca patented anti-tamper labels made of destructible materials that break in different pieces when lifted from the product avoiding the repositioning or opening of the product.

Void Labels

Anti-tamper labels, when lifted they leave evidence of a previous opening attempt on the products avoiding the repositioning.

Serialized Labels

Track&trace, serialized and customized labels with datamatrix, QR code, high security codes with special inks, visible or invisible, protecting the authenticity of the product against the numerous counterfeiting attempts and "grey markets" that create a wrong image of own brand and therefore an important damage to the company.

THE ECO-FRIENDLY PRODUCT RANGE

Arca is attentive to environmental sustainability issues and for this reason we offer products aimed at making processes more efficient and less impacting from an environmental, social and economic point of view. Our green proposals include thinner, biodegradable and compostable, recycled materials to bio based ones, FSC® certified or papers deriving from natural and vegetable fibers.

FOR SPECIAL USES

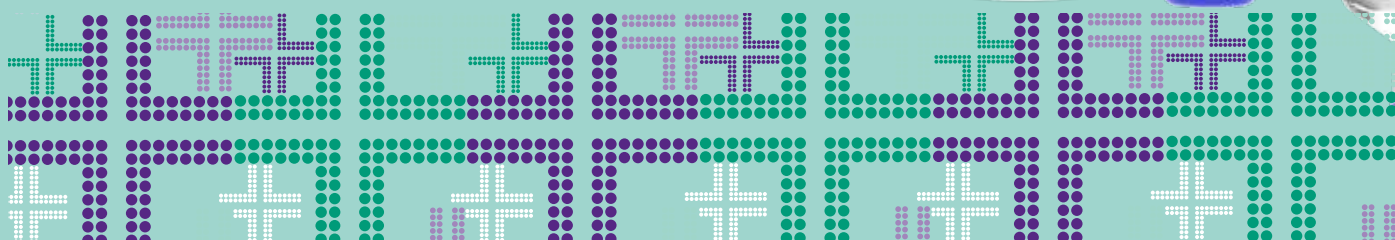

Dose Guard™ Labels

Safe blister packs “child resistant & senior friendly” available in two different versions:

- “peel&push”: the label is lifted using the tab and the product is picked pressing the other blister side;
- “peel-peel&push”: the first label is lifted using the tab, the second label is removed and the product is picked pressing the other blister side.

Flebo Label

Self-adhesive labels combined with a collapsible or extensible hook, ideal for injectable solutions to hang the bottle without the use of IV basket. The convenience of the collapsible hook makes it a very useful tool in case of urgent administrations as well as in daily use in hospitals and/or other places of hospitalization.

FOR LOGISTICS

Plain Labels

Plain labels, available in many formats, for the logistics sector. Their purpose is the transfer of information between the digital and physical worlds during the various phases of transport of products and goods.

We select materials that guarantee long life and perfect reading of texts and barcodes.

Arca’s neutral labels guarantee:

- perfect compatibility with thermal transfer heads on desktop printers and print apply units
- excellent product adhesion
- easy application with any labeler

A 100% Italian group since 1948
