- Analysis of particle size distribution (PSD)
- Development, transfer and validation of PSD measurement methods

Excellence crafted in Germany

Micronization plays a vital role in minimizing production expenses resulting from inconsistent API quality and product rejects. Leveraging our expertise in particle design, we provide our clients with dependable solutions for their manufacturing processes. Our services cover everything from initial trials to large-scale industrial production, catering to quantities ranging from a few grams to tons, all adhering to GMP-certified quality standards. GfM is regularly inspected by regulatory bodies such as the FDA, PMDA and German local authorities.
