This is how Bizzmine eQMS works for Geodis UK

Bizzmine Digital Quality Management

About Geodis

GEODIS is a world leader in transport and logistics, with widely acknowledged expertise in all aspects of the supply chain. It delivers shipments through its operations in land, air, and sea transport, as well as contract logistics.

> *Bizzmine brings quality and business excellence into the scope of all our departments.*

CHALLENGES ⌄

The struggles that we had were based on organization, mainly because prior to Bizzmine we were using a paper-based system with a mix of SharePoint and it was pretty much impossible to keep on top of quality management, especially with the size of our organisation.

SOLUTIONS ⌄

The software has enhanced our quality culture because now, function owners are taking more responsibility for processes like non-conformities, CAPAs, risk management, and change control.

CAPA Management	**Change Control**
Risk Management	**Non-conformities**

BENEFITS ⌄

1 **Full traceability**

We have full traceability on who has received, read, and understood what procedures.

2 **Better collaboration between departments**

All our departments are using the Bizzmine software. We are integrating the entire system into the UK for full quality management across all functions.

3 **Perfect visibility**

The regulatory bodies had nothing but praise for our eQMS so far. No more relying on calendars and notifications and chasing up on things. **The built-in workflows make any quality manager's job a dream.**
