The value of Bizzmine for CryoConcepts

Bizzmine Digital Quality Management

About CryoConcepts

CryoConcepts is a company that manufactures cryosurgical devices under the guidance of FDA and ISO regulations for use by healthcare professionals. The company is a leader in cryo-based technologies that treat skin issues such as warts, skin tags, and hyperpigmentation. Its products are sold in over 44 countries.

CHALLENGES ⌄

Due to the company's structure, where employees are decentralized and sometimes located in other countries, a stationary approach to documentation control of the quality system would have been difficult to implement and maintain. For this reason, **an Internet-based cloud approach to a common system was adopted early on as one of the company philosophies**.

SOLUTIONS ⌄

The Document Control Module is a perfect fit for our needs. Early in the life of CryoConcepts, we implemented the Document Control Module to support the structure of our Quality Management System. It houses our quality system documents and design files.
We make extensive use of the change control and revision tracking features already built into the system. The use of the document control module has streamlined our processes for evaluating, approving, and publishing documents.

BENEFITS ⌄

1 **Cost saving**

By working with Bizzmine, we have saved on personnel costs. We no longer have to worry about system maintenance, backups, disaster recovery preparation, etc. Plus, we had no upfront investment costs for hardware.

2 **Easy and secure access**

A computer with internet access is all that is needed to implement and access the system. Bizzmine takes care of the rest.

3 **Quick and efficient**

The document control module provides our employees with secure access via the Internet so that we can quickly and efficiently put the latest documents into effect.
