

Children move a lot throughout the day. During physical activity such as sport or when travelling to warm regions, the body loses both fluids and valuable electrolytes due to heavy sweating. These include the minerals sodium, potassium and chloride. It is important that the excess fluid and electrolytes are replenished.

Our dietary supplement HydriaX Junior contains the ideal combination of dextrose, sodium chloride, sodium hydrogen carbonate and potassium chloride and has a fruity strawberry flavour.

The additional vitamin C contributes to the normal function of the immune system, the reduction of tiredness and to normal energy-yielding metabolism.

Product information of product sample HydriaX Junior
