LSPedia

Big Data Module

Enjoy peace of mind while you maintain visibility on how things are flowing and avoid any unpleasant surprises.

Complete Supply Chain Visibility

LSPedia's Big Data module simplifies trading partner identification and management to enhance supply chain visibility and support holistic decision making. Seamless integration of GS1 standardized company prefixes, Global Location Numbers (GLNs), and Global Trade Identification Numbers (GTIN) enabling data analytics and ensuring accurate KPI calculation.

Control Your Supplier Network

Use visibility into license, EPCIS interoperability, and EPCIS exceptions resolution details to proactively manage supply chain risk, understand supplier infractions, and refine compliance strategies.

Transform Customer Engagement

Tailor your interactions based on precise customer information, including GLN assignment, state/DEA license status, suspicious order monitoring, and attribution.

Unlock Product Intelligence

Arm your sourcing and customer service teams with data-driven insights. Proactively steer sales and operations planning – and eliminate bottlenecks – by monitoring crucial product details such as WEE (waiver, exception, exemption), recall, suspicious order monitoring (SOM), and product velocity.

Get Actionable Insights

Empower your team with targeted communication strategies and amplify service level agreements for enhanced performance, leveraging comprehensive scorecards for suppliers and customers.
