AMETEK®

Your Trusted Partner in Medical Device Manufacturing

In today's challenging healthcare environment, you're looking for a contract manufacturer to help simplify the complexities of supply chain and expedite commercialization. As your trusted partner with a shared commitment to quality, you will feel confident as we come alongside to serve as an extension of your team by delivering world class operational excellence and SIOIP planning through over a century of combined expertise in high-precision manufacturing, advanced engineering, and design support.

You can count on Paragon Medical, a business of AMETEK®, as your strategic partner in medical device manufacturing, offering an end-to-end supply chain solution from initial concept and product development, to verification and validation testing, to final production, assembly, and ongoing strategic demand planning. Discover how you can experience a consistently remarkable partnership through Paragon Medical's differentiated and personalized solutions designed to exceed your expectations every time.

Your experienced new product development partner

Our expert engineers have deep experience across multiple fields and disciplines including orthopaedics, cardiovascular, surgical robotics, drug delivery systems, and dental among many others.

We know how to get new products to market across the globe—from performance to logistics to regulatory approval—and can help you streamline verification and validation.

When you partner with Paragon Medical, you'll get best-practice advice and support throughout the entire new product development process.

Protecting your supply chain, driving efficiencies

In healthcare, continuity of supply is critically important. Supply chain failure is not an option. We understand. As a well-funded international business, we have the size and scale to ensure you get the components you need, when you need them, without compromise.

More than this, as a provider of a wide range of precision components, we can help you consolidate suppliers and achieve efficiencies on multiple levels. And we can enter at any phase of a project, from initial whiteboard concept to final flawless production.

Two core focuses, a world of precision capabilities

Paragon Medical provides operational expertise in two core focus areas.

Orthopaedics teams support customers looking to create world-class products and components for the global orthopaedic market. From hip broaches to pedicle screws, we specialize in developing highly competitive value-engineered products within challenging market dynamics.

Medical and surgical teams work with ambitious surgical manufacturers, helping accelerate new product development with high-precision components for everything from implants and surgical robotics to drug delivery systems, single-use disposable devices and assemblies.

And that's just the start.

With facilities across the globe, you have access to our breadth of expertise and world class operational excellence that offer a true end-to-end supply chain solution with consistently remarkable service.

We operate as one team, with one purpose – to serve you.

The difference that makes a difference

Selecting a manufacturing partner for new product development is a critical decision for any business. Getting it right will have a significant impact on your success.

So why should you partner with Paragon Medical?

01

We understand healthcare

Paragon Medical has been serving the healthcare market for over 30 years. We've built a significant depth of expertise across applications, processes, and ever-evolving regulatory demands. And because we have worked with businesses across a wide range of specialties, we bring a broader understanding of how to streamline new product development in such a demanding sector.

02

We are experts in commercialization

While every new product has to meet the needs of physicians and patients, it must also succeed commercially. This means carefully balancing performance, quality, and cost. It's why our DFM experts will work with you to optimize your components for manufacturability. Rigorous QA procedures ensure the quality of every part we produce. And we'll stop at nothing to hit the key milestones that will keep your projects on track.

03

World-class operational excellence

With state-of-the-art facilities in the US, Europe, and Asia, we have tuned our business to support the specific needs of today's ambitious healthcare manufacturers. We are experts in a wide range of manufacturing techniques and materials, giving design engineers greater freedom to push their ideas further, faster. And, because the industry never stands still, we are committed to continuously improving every aspect of how we operate.

04

We are defined by service

We're dedicated to becoming true partners to your new product development teams. It's why we spend time to fully understand your business, your customers, and their patients. We employ a world-class sales and operations planning process to ensure we manage risk in supply continuity, capacity planning, and forecast variance. Ultimately, you can expect us to become a valuable extension to your in-house capabilities.

05

It's all about the team

Collaboration is in our DNA. We understand that no single individual can deliver what we can achieve together. Today, creating and managing highly effective teams is fundamental to new product development success. That's why we invest time and resources to develop our people and ensure they get to know your teams, how you work, and your expectations. Because together, there's nothing we can't achieve.

A partner built around the needs of today's healthcare businesses

Paragon Medical has built its business around delivering the capabilities healthcare manufacturers need to rapidly turn new innovations into market-leading products.

We offer comprehensive design services, working with you from initial concept and product development to verification and validation testing. Because of our focus on specialist healthcare applications, we can deliver expert support throughout the regulatory submission process. And we can partner with you across both OEM and private label products.

Our FDA registered facilities produce everything from implants, surgical instruments and cases and trays to drug delivery system components, and laparoscopic device hardware.

We can partner with you from initial prototype, to commercial manufacturing of individual components in volumes ranging from hundreds to millions. Our ISO 8 Class 100,000 certified cleanroom provides medical-grade packaging and labeling. And we offer full product assembly capabilities to further accelerate production and shorten your time to market.

Finally, we have in-depth technical expertise across a wide range of surgical materials, metals, specialty alloys, and plastics. It means we can help you determine the right combination of material and process to meet your precise needs.

So no matter how demanding the application or how stringent the quality and regulatory demands, you can trust Paragon Medical to be with you every step of the way.
